Dear CITY OF RIVERSIDE:

During the next few weeks, Alliant Energy and its project partners will begin work on the electric system in your area. Upgrades to our energy grid ensure a safe and reliable electric system for your family or business.

Preparation:

- Colored flags and stakes will mark existing utilities and proposed excavation areas. Please do not remove these flags or stakes.
- Let the crew know if you have any underground facilities, such as an underground dog fence, satellite dish cables, septic system, or privately installed electric lines. Provide this information to the crew when work begins or use the contact information below.

Construction:

- Large trucks and digging equipment may park in the area. During excavation, we will minimize the impact and disturbance as much as possible.
- To prevent sewer damage, crews may need access to your sewer line. This helps prevent cross bores within the sewer line and is required to ensure the safest service possible. In some instances, we may need to enter your residence to make a determination.

Conversion:

- Once the new electric lines are installed, tested, and carrying electricity, we may need to connect your service to the new lines, which may cause a short service disruption.

Property restoration:

- After the project is complete, crews will perform landscape work. This can include replacing soil and planting grass seed. Please water the new seed daily to ensure it grows. You can carefully remove any straw matting crews put in place once the grass is growing well.
- The timing of restoration work will depend on weather conditions. Fall projects could require us to perform restoration work the following spring during the best growing season.

We may contact you periodically to inform you of the project's progress. To confirm or update your contact information, visit alliantenergy.com/myaccount or call 1-800-ALLIANT (800-255-4268). Please feel free to contact us using the information below with any questions or concerns.

Thank you,
